## 1) Checking compatibility

Table of models (not exhaustive)

| Alias                 | Model Number | Pump specs  | Wires | Supported |
|-----------------------|--------------|-------------|-------|-----------|
| Riviera               | 12220        | Eggshape    |       |           |
| Monaco                | 54113        | Eggshape    |       |           |
| Vegas                 | 54122        | Eggshape    | 6     |           |
| Miami                 | 54123        | Eggshape    | 4/6   | Maybe     |
| Palm Springs          | 54129        | Eggshape    | 4     |           |
| Hawaii/Hydrojet       | 54138        | Square      | 4     | Yes       |
| Palm Springs/Hydrojet | 54144        | Square      |       |           |
| Paris                 | 54148        | Eggshape    |       |           |
| Hawaii                | 54154        | Eggshape    | 4     |           |
| Siena                 | 54156        | Eggshape    | 4     |           |
| Honolulu              | 54174        | Eggshape    | 6     |           |
| St. Moritz            | 54175        | Eggshape    |       |           |
| Bali                  | 54183        | Eggshape    |       |           |
| Milan                 | 54184        | Eggshape    |       |           |
| Tahiti                | 54186        | Eggshape    |       |           |
| Helsinki              | 54189        | Eggshape    | 6     | Yes       |
| Cancun                | 54286        | Eggshape    |       |           |
| Ibiza                 | 54291        | Eggshape    |       |           |
| Havana                | 54298        | Eggshape    |       |           |
| Unknown 2021          | ?            | Square 2021 | 6     | Yes       |
| Vegas                 | 54112        | ?           | 4     |           |

4-wire models are less documented and probably need more electronics and programming skills.

### Open the pump to verify number of wires

Unscrew the 6 screws as the picture shows, and carefully lift the display. It is attached with a cable with a connector on it. Check if there are 6 or 4 wires/pins. Other models can be disassembled in a similar manner. On the Hydrojets you must remove the whole cover, not the display. That pump is heavy and fiddlier to disassemble on your own.

Example - eggshaped 6-wire pump

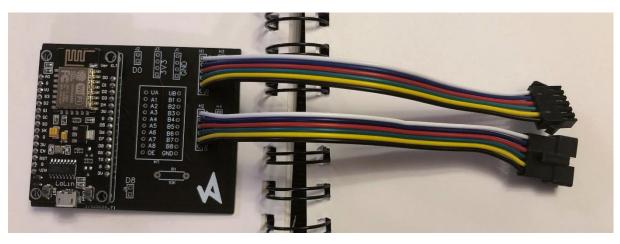

## 2) Hardware

### BOM

| ESP8266 NodeMCU 1.0 (12E) (NOT ESP32)   |  |
|---|--|
| 8 channel bidirectional level converter TXS0108E                                    |  |
| 6 or 4 pin male/female pair cable 0.1" spacing:  JST SM Housing Connector           | 6 Pin                                    |
| PCB LINKS ARE COMING  | DO D |
| Resistor, 10K Ohms, throughhole   | Ontrional                                |
| Female header pins (0.1") to solder to the PCB for the ESP and LLC to be removable. | Optional                                 |

### Build

Solder the 6-wire cables to the PCB (H1, H2): <a href="https://github.com/visualapproach/WiFi-remote-for-Bestway-Lay-Z-SPA">https://github.com/visualapproach/WiFi-remote-for-Bestway-Lay-Z-SPA</a> Last edited 2021-04-23 10:22

For the 4-wire version, use the 4-hole cables and solder to the two 4-holes section (H3, H4).

Pinout (Colors and pinout on your pump may differ!):

| 1 | (Uppermost. Black on pump) | = 5V     |
|---|----------------------------|----------|
| 2 | (Red on pump)              | = GND    |
| 3 | (Yellow on pump)           | = DSP TX |
| 4 | (Green on pump)            | = CIO TX |

Solder the 10 K resistor.

You can go on and solder the LLC and ESP8266 directly to the PCB, but I recommend using female headers. In case you want to switch or reuse them.

DO, D8, 3V3 and GND is left empty. They are there for the possibility to connect auxiliary equipment.

Put the PCB in a box, plastic bag or something to protect against water if you want. Don't connect the connectors to the pump yet.

### 3) Software

#### 6-wire

DL and install

Arduino IDE <a href="https://www.arduino.cc/">https://www.arduino.cc/</a>

BWC\_v2.0.0 library <a href="https://github.com/visualapproach/WiFi-remote-for-Bestway-Lay-Z-SPA/tree/master/Code">https://github.com/visualapproach/WiFi-remote-for-Bestway-Lay-Z-SPA/tree/master/Code</a>

LittleFS install https://arduino-

esp8266.readthedocs.io/en/latest/filesystem.html#uploading-files-to-file-system

Link to LittleFS upload tool <a href="https://github.com/earlephilhower/arduino-esp82661">https://github.com/earlephilhower/arduino-esp82661</a>ittleFs-plugin/releases

From Arduino library manager, install

ArduinoJSON (Benoit Blanchon)

ESPDateTime https://github.com/mcxiaoke/ESPDateTime

WebSockets <a href="https://github.com/Links2004/arduinoWebSockets">https://github.com/Links2004/arduinoWebSockets</a>

WiFiManager <a href="https://github.com/tzapu/WiFiManager">https://github.com/tzapu/WiFiManager</a>

And for MOTT sketch also

PubSubClient <a href="https://github.com/knolleary/pubsubclient">https://github.com/knolleary/pubsubclient</a>

Open File/examples/BWC2.0.0/.. from the Arduino IDE.

Select the right board (NodeMCU12E), and set "FS 2MB/OTA 1MB", speed 80 MHz. select correct COM port.

Upload sketch via USB. Password "esp8266"

Upload LittleFS Data or you will get a 404!

An Access Point is created called "Auto portal". Log in and enter your wifi credentials. Visit IP/ and click "Go to config page" Enter your settings, click SAVE. The device's IP is shown in the serial monitor window.

From now on you can update the device over the air (OTA) by selecting the new IP instead of the COM port. You need to restart Arduino IDE for this to show up.

#### 4-wire

DL and install

PIO in visual studio code.

BW4W library <a href="https://github.com/visualapproach/WiFi-remote-for-Bestway-Lay-Z-SPA/tree/master/Code">https://github.com/visualapproach/WiFi-remote-for-Bestway-Lay-Z-SPA/tree/master/Code</a>

Edit models.h to suit your model. (Only 2 models to choose at the moment)

Compile and upload sketch

<u>Upload LittleFS data or you will get a 404!</u>

### 4) MQTT

This chapter is for advanced users. If you know what MQTT is, and have a MQTT broker, this is what you need to know:

There is two ways to enter your credentials. You can edit the "globals.h" file before compiling and then you are done with it. Or you can go to the web interface and click on the MQTT link. If you save from the MQTT web page it will override globals.h.

Device is publishing following topics:

BW\_2.0.0/status

BW\_2.0.0/MAC\_Address

BW\_2.0.0/MQTT\_Connect\_Count

BW\_2.0.0/message

Device is subscribing to topic BW\_2.0.0/command

Payload in message is a JSON string with these key/value pairs:

| KEY | VALUE                           |
|-----|---------------------------------|
| LCK | LOCKEDSTATE                     |
| PWR | POWERSTATE                      |
| UNT | UNITSTATE (0=F, 1=C)            |
| AIR | BUBBLESSTATE                    |
| GRN | HEATGRNSTATE                    |
| RED | HEATREDSTATE                    |
| FLT | PUMPSTATE                       |
| TGT | TARGET TEMP                     |
| TMP | TEMPERATURE                     |
| CH1 | CHAR1 DISPLAY'S FIRST CHARACTER |
| CH2 | CHAR2                           |
| СНЗ | CHAR3                           |

#### Payload in command must be a JSON string with these key/value pairs:

| KEY      | VALUE  |
|----------|--|
| CMD      | INTEGER, see next table                                    |
| VALUE    | MIXED  |
| XTIME    | Execution time in UNIX TIMESTAMP or 0 for immediate action |
| INTERVAL | Repeat every Nth second INTEGER or 0 for NO REPEAT         |

#### Available commands (CMD) are

| 0 | SETTARGET                    |
|---|------------------------------|
| 1 | SETUNIT                      |
| 2 | SETBUBBLES                   |
| 3 | SETHEATER                    |
| 4 | SETPUMP                      |
| 5 | RESETQ (clear command queue) |

| 6  | REBOOTESP                         |
|----|-----------------------------------|
| 7  | GETTARGET (internal use)          |
| 8  | RESETTIMES                        |
| 9  | RESETCLTIMER                      |
| 10 | RESETFTIMER                       |
| 11 | SETJETS (only some 4-wire models) |
| 12 | TAKECONTROL (only 4-wire)         |

### 5) Connect

Unplug pump from mains! Connect device to pump. Close the display with the screws. Turn on pump and enjoy.
